SUMMARY

I am a security engineer and researcher who uncovers **cross-domain threats** in AI-integrated systems, IoT, cellular networks, and cyber-physical infrastructure.

- **DARPA AIxCC finalist:** Designed and implemented an *agentic LLM framework* for automatic bug discovery and exploit generation across oss-fuzz codebases.
- **Samsung SDS (special contract):** Hardened security across various product types and service architectures including AI-powered features (e.g., securing prompt-injection chains that escalate to remote-code execution, impersonation, and sensitive-data leakage).
- **Research & IP:** 9 top-tier papers (USENIX Security, CCS, NDSS, TSE, TMC), 7 patents, and 17 industry / government security projects delivered.
- **CTF leadership:** Led KAIST graduate hacking team *KaisHack*, organized Samsung CTF 2017/18, reached the DEF CON CTF finals five times, and won multiple CTFs.

My mission is to translate cutting-edge research into *real-world defences* that secure large-scale systems.

WORK EXPERIENCE

Georgia Tech, Postdoctoral Fellow, Atlanta, GA Feb. 2025 – Present

As a finalist of DARPA AIxCC, I led design and implementation of LLM-powered exploit generation and fuzzing agents, significantly improving team productivity and analysis throughput through robust automation and tooling.

Manager: Prof. Taesoo Kim

Samsung Security Center, Samsung SDS, Senior Engineer, South Korea Aug. 2022 – Dec. 2024

Drove Red Team efforts to proactively identify and mitigate security threats across all Samsung affiliates' products and services, including AI-integrated systems, IoT/embedded devices, Android applications, and kernel-level mitigations. Expanded the traditional Red Team perspective to AI safety issues and implemented an automated AI-safety checker leveraging safety guardrail frameworks.

KAIST, Postdoctoral Researcher, South Korea Mar. 2022 – Jul. 2022

Conducted advanced research on smartphone baseband authentication bypass, acoustic and EMI signal injection attacks against drone sensors, and recovery techniques for spoofed signals.

Manager: Prof. Yongdae Kim

Pinion Industries, Research Intern, South Korea Dec. 2013 – Feb. 2014

An automotive software and security startup. I analyzed and exploited in-vehicle components (network systems, AVN, telematics, smart keys, ECUs), including achieving remote code execution on AVN systems and investigating smart key cloning for potential theft scenarios.

KAIST CERT, Student Senior, South Korea Sep. 2010 – Aug. 2012

Investigated and analyzed security incidents, including identifying and attributing an attack that led to the apprehension of the perpetrator by law enforcement.
