Summary

I am a security engineer and researcher specializing in uncovering novel, cross-domain security threats across AI, IoT, cellular networks, and cyber-physical systems. I have a proven track record of identifying and developing practical security solutions at scale, from AI-based automated vulnerability discovery to securing enterprise-level AI infrastructures. As a DARPA AIxCC finalist, I demonstrated expertise in building LLM-powered exploit generation agents and advancing autonomous security analysis. At Samsung SDS, I drove Red Team operations to proactively mitigate threats against global products and services. Recognized through 5x DEFCON finals, 9 top-tier publications (USENIX Security, CCS, NDSS, TSE, TMC), 7 patents, and 17+ industry/government projects. Passionate about bridging cutting-edge research with real-world impact to secure large-scale systems and services.
